## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Plunkett (4,093,900).

Plunket teaches a system that switches in a number of fixed value loads (braking resistors) in response to measured voltage conditions. Elements 12 and 34 are part of a “potential converter”/control unit combination, with 52,54,56 understood to be the switching units recited in the claims. The control circuit monitors the voltage and adds or removes loads as needed to prevent overvoltages and produce the desired dynamic braking in a vehicle system (see abstract).

### ***Allowable Subject Matter***

Claims 2-10,12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The above mentioned dependent claims add limitations that relate to one of the switched loads being a mode change in the system control unit. The prior art of record

does not teach or fairly suggest the use of the control unit as one of the loads to be switched in response to an overvoltage.
